PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building scalable backend systems, REST APIs, GraphQL services, and AI-powered applications using Python, Django, Flask, React, and PostgreSQL. Experienced in NLP, LLM integration, and machine learning workflows, with proven success delivering production-ready solutions that improve performance, automation, and operational efficiency.

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, C, Django, Flask, React, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap

AI / ML: Google Gemini API (LLM integration), NLP, NER, BERT, Hugging Face Transformers, Scikit-learn, TensorFlow, PyTorch, spaCy, Pandas, NumPy

Databases & Backend: PostgreSQL, MySQL, MSSQL, REST APIs, GraphQL, Elasticsearch / Kibana

DevOps & Cloud: Docker, Jenkins, CI/CD, Git, GitHub, Firebase (Authentication, Hosting), Selenium (test/browser automation)

Agile & Collaboration: JIRA, ServiceNow, ClickUp, Asana

PROFESSIONAL EXPERIENCE

Software Developer | AT&T (via Connx Inc)

Sep 2021 – Mar 2023

- Developed and optimized API-driven telecom applications using Python, Django, and GraphQL, refactoring legacy systems to cut deployment time by 50% and improve long-term code maintainability
- Designed and implemented RESTful APIs and CRUD operations backed by PostgreSQL, and built dynamic, real-time dashboards using JavaScript, Bootstrap, and jQuery for live data visualization
- Integrated multiple data sources via GraphQL, improving real-time data retrieval efficiency across services
- Ingested data into Elasticsearch and built client-specific Kibana dashboards tracking services, integrations, and key APIs for ongoing production monitoring
- Triage and prioritized incoming ServiceNow tickets, enabling the Provisioning Team to resolve high-priority issues faster and reduce backlog
- Partnered with cross-functional teams to troubleshoot production issues, strengthen system reliability, and improve backend performance through query optimization

Associate Software Engineer | Quadrant Resources

Nov 2019 – Aug 2021

- Designed and delivered scalable backend services and RESTful APIs using Python and Django, enforcing validation, filtering, and structured output requirements for AI-generated results
- Engineered an agentic AI workflow using Python, spaCy, BERT, and Hugging Face Transformers to automate resume parsing, candidate enrichment, and job-matching decisions end-to-end
- Built a Named Entity Recognition (NER) model to extract structured data (name, email, phone, organization, experience) from unstructured text, designing a multilayer neural network for high-precision entity classification
- Trained and evaluated ML models on a corpus of 600+ annotated resumes, applying TF-IDF and Word2Vec embeddings for feature engineering to improve extraction accuracy
- Developed Python web-scraping tools (Selenium) to ingest job listings from LinkedIn, Indeed, and other portals, powering the AI pipeline's data layer, and built interactive dashboards to visualize AI outputs and validation outcomes
- Applied unit testing and CI/CD pipelines within JIRA-tracked sprints, collaborating with engineering and business stakeholders to translate requirements into scalable backend services and API enhancements

Software Trainee | Quadrant Resources

May 2019 – Oct 2019

- Built server applications and client interfaces using Python, Django, jQuery, and Bootstrap, and designed and launched a platform to automatically generate forms
- Created and connected APIs to Django applications to store, retrieve, and manipulate data, configuring databases and backend applications to support core functionality

- Translated end-user feedback into meaningful product improvements and resolved technical issues in collaboration with internal teams

Career Break

Mar 2023 - Present

- Relocated to the USA and took family leave
- Maintained active software engineering skills by building and shipping production-style AI and full-stack applications using React, Django, AWS, and LLM APIs, including the live project below

Personal Project: Netflix GPT (live demo) — *React, Redux, Firebase, TMDB API, Google Gemini API*

- Built and deployed a full-stack, Netflix-style movie discovery app integrating the Google Gemini API for AI-powered, multi-language search recommendations
- Designed Redux state-management slices and reusable components to coordinate user, movie, and AI-suggestion data across the application
- Implemented Firebase authentication with protected routes, and optimized performance with memoization for a fully responsive UI
- Managed production deployment via Firebase Hosting, including environment configuration and live debugging

EDUCATION

Bachelor of Technology (B.Tech) | Shri Vishnu Engineering College for Women, India, 2019

Work Authorization: H4 EAD
