Michigan | 248-896-7320 | srinavya109@gmail.com | [linkedin.com/in/sri-navya-k-663816117](https://www.linkedin.com/in/sri-navya-k-663816117)

PROFESSIONAL SUMMARY

Python engineer with 4+ years of professional experience building and operating production backend services, plus hands-on experience integrating LLMs into shipped applications — prompt and context engineering, structured/validated outputs, and multi-language generation via the Google Gemini API. Strong NLP/ML foundation (NER, BERT, Hugging Face Transformers, embeddings) from building an end-to-end AI automation pipeline. Comfortable owning a system end-to-end: building it, deploying it, and fixing it when it breaks. Fluent with Git, Docker, CI/CD, and modern API frameworks (REST/GraphQL).

TECHNICAL SKILLS

Languages & Frameworks: Python (4+ yrs production), JavaScript, C, Django, Flask, React, Redux

LLM & AI Engineering: Google Gemini API (prompt/context engineering, structured outputs), NLP, NER, BERT, Hugging Face Transformers, embeddings (Word2Vec, TF-IDF)

ML Frameworks: Scikit-learn, TensorFlow, PyTorch, spaCy, Pandas, NumPy

Backend & Databases: REST APIs, GraphQL, PostgreSQL, MySQL, MSSQL, SQL query design

DevOps & Tooling: Git, GitHub, Docker, Jenkins, CI/CD, Elasticsearch/Kibana

Agile & Collaboration: JIRA, ServiceNow, cross-functional stakeholder communication

PROFESSIONAL EXPERIENCE

Software Developer | AT&T (via Connx Inc)

Sep 2021 – Mar 2023

- Built and operated production Python/Django services and RESTful APIs backed by PostgreSQL, owning reliability for live enterprise telecom applications
- Designed structured, validated API contracts for CRUD operations, refactoring legacy systems to cut deployment time by 50% and improve long-term maintainability
- Integrated multiple systems via GraphQL, improving real-time data retrieval and interoperability across services
- Built Kibana dashboards on Elasticsearch data to monitor live service health and surface operational insights for stakeholders
- Triaged and resolved production issues via ServiceNow, owning fixes end-to-end and reducing backlog for the Provisioning Team
- Worked within Git, Docker, and CI/CD pipelines in an Agile, JIRA-tracked environment

Associate Software Engineer | Quadrant Resources

Nov 2019 – Aug 2021

- Engineered an end-to-end AI automation workflow in Python, chaining NLP models (spaCy, BERT, Hugging Face Transformers) to parse, enrich, and structure unstructured resume data into validated outputs
- Built a Named Entity Recognition (NER) model using a multilayer neural network, applying Word2Vec and TF-IDF embeddings, and trained/evaluated it against real outcomes on a corpus of 600+ annotated documents
- Implemented backend APIs enforcing strict validation, filtering, and structured JSON output requirements for AI-generated results
- Developed Python data-collection tools (Selenium) to retrieve and validate external data feeding the AI pipeline
- Built dashboards to monitor AI output quality and workflow execution, closing the feedback loop with stakeholders
- Applied unit testing and CI/CD within JIRA-tracked Agile sprints; collaborated with engineering and business stakeholders to scope AI feature work

Software Trainee | Quadrant Resources

May 2019 – Oct 2019

- Built server applications and client interfaces using Python, Django, jQuery, and Bootstrap
- Created and connected APIs to Django applications to store, retrieve, and manipulate data, configuring databases and backend applications to support core functionality
- Translated end-user feedback into meaningful product improvements and resolved technical issues in collaboration with internal teams

Career Break

Mar 2023 – Present

- Relocated to the USA and took family leave
- Independently built and shipped a production LLM-integrated application, working hands-on with prompt/context engineering and structured, multi-language output generation via the Google Gemini API, detailed below

Personal Project: Netflix GPT (live demo) — *React, Redux, Firebase, TMDB API, Google Gemini API*

- Integrated the Google Gemini API in production, applying prompt/context engineering to generate personalized, multi-language natural-language search recommendations
- Designed Redux state management and reusable components to coordinate user, movie, and AI-suggestion data across the application
- Owned the app end-to-end: authentication, deployment via Firebase Hosting, environment configuration, and live debugging

EDUCATION

Bachelor of Technology (B.Tech) | Shri Vishnu Engineering College for Women, India, 2019

Work Authorization: H4 EAD
